Clean force 1400 manual

advertisement ▼ Scroll to page 2 10 advertising Thank you for your participation! * Is evaluation very important to improve the work of artificial intelligence, which forms the content of this pure force or pure bohet of the project? Well, I got the fair reward for getting a hard-core Home Depot cheap pressure wasp. Total accounting: lasted 3 years and 1 month. For a product that was priced in the \$100 range, I was able to make use of the borrowed time. But I was never sure what the fatal flaw in Clean Force 1400 would be. As it turned out, the threaded connector, which accepts the water supply hose eventually worn out, shredded the fibers. This is because the connector is made of plastic! By spending a little extra on a copper connector, Clean Force would have eliminated that weak spot. In these three years, you've done a good job. I'm not complaining. He even helped me wash the tile in my shower. Make no mistake: Clean Force 1400 is under pressure, bare bones, entry-level stuff. With the psi 1400, this pressure undermarker is about the lowest power undersling on the market. But at least the price is proportional to the energy level, and the machine has some good points. If you need a lot of pressure, forget the electric models. They just don't match the gas-powered models. Electric pressure adecs for those who do not want the inconvenience of dealing with gasoline engines. Don't transport petrol from the petrol station: just plug it in and you're good to go. But the cords! When using a pressure aalator, you already have two lines connected to the machine: the fresh water supply and the underwater hose. The addition of a power line means traction around three heavy lines. This usually inhibits movement. It's an acceptable compromise if you know what you're getting yourself into. I bought it for just one use: clean the siding of my house before painting. This unit delivers 1.4 liters of water per minute below 1,400 psi (pounds per square inch). The power cord is 15 meters long and the hose is 19 feet long. The on-board detergent tank automatically mixes the detergent with the water. Switch the detergent flow on or off by sliding the end of the spray stick in or out. The spray stick is aligned from a fine needle tip to a wide spray. Well, it works. The most concentrated flow, this pressure kerring blows off the worst goo on the sidewalk - embedded dirt, moss, mud, etc. Strong enough to chew soft wood and even climb down the paint. But it's slow. With a stronger machine, you would be able to knock out 20 feet of concrete entry cleaning in five or ten minutes. But with this lower energy pressure underslour, you're expected to spend an hour on the same task. This is because only the most concentrated stream blast away embedded dirt, and this stream covers only about four square inches. It's a painfully slow process. What I really hated about Clean Force Pressure Aher was that it never stayed straight. This is a machine with two wheels at the bottom - it looks like a housing vacuum. And like a vacuum, it always capsized. Even though the cables attach to the bottom of the machine (theoretically minimizing the chance of pulling the machine off), the machine still tips because of vibrations caused by blasting the underrunner on and off. Finally, I left the underrunner on the side if only fresh water. This was a problem when I wanted to use the detergent/water mixture. The detergent container must be vertical as it picks up the detergent with a siphon tube. So, we had to reinforce the plane to the house to make sure it didn't roll over. I like the tiny size of Clean Force, which is no more than a couple of square feet of floor space. Also, the nozzle, wand, hose, and power line are stored quite nicely on the machine. Buy if you need to: lightly spray down sidewalks; clean siding in a one-storey house; or shoot out goo in small areas. Over the uses and beyond, the Clean Force 1400 may be crazy; more powerful electric or gas model. Loading... 1 Table of Contents 2 3 4 5 6 7 8 9 10 Lot Number Quantity Part NévF 1 Detergent tank assemblyNeedle (for blower cleaning)* The water filter is pre-fixed on the water inlet, which is located at the front of the pressure washer. Before starting any cleaning tasks, it is important to check the area for objects that may pose a danger. Remove any objects from the work area that have tripped, such as toys or outdoor furniture. Make sure all doors and windows are tightly closed. Water supply (cold water only)Only suck water through the appliance. It can only be used with cold water supply. Garden hose should beat at least one 1/2 (13 mm) in diameter. The flow rate of the water supply must not fall below 2 EPM (gallons per minute) [9.1 lpm (lites per minute)]. The flow rate shall not exceed 104 °F (40 °C) for one minute in an empty 5-gallon (19 L) tank. The water supply .! Never use the pressure wast to suck in water contaminated with solvents (e.g. paint thinners, petrol, oil, etc.). ! Water insaliation contamination may damage the appliance. To avoid this risk, it is recommended to check (located inside the water ins water. For cleaning, see maintenance section).! Always make sure that the dirt is sucked in with a clean water source and an additional water water To extend the life of the appliance, rest the appliance for 5 minutes every 30 minutes. MOUNTING AND OPERATING INSTRUCTIONSConnect the gun holder and the power cord holder. Place the top handle in the reeds and press forward until you audibly lock the © Portable Power Equipment Vancouver, WA, USA
